Profile

Computer Science undergraduate with hands-on experience in machine learning, deep learning, computer vision, NLP, and agentic AI systems. Experienced in developing production-grade AI agents, RAG applications, and intelligent systems from scratch, with a strong interests in AI research and real-world intelligent systems.

Education

08/2023 – Present Karachi, Pakistan	Bachelor of Science in Computer Science <i>FAST NUCES</i> CGPA: 3.73
08/2021 – 05/2023 Karachi, Pakistan	A levels <i>Highbrow School & College</i> - Mathematic: A - Physics: A - Chemistry: B

Technical Skills

Languages Python, C/C++, SQL, PostgreSQL	Generative AI & Agentic Systems LLMs, RAG, Vector Databases, Agentic AI, Tool Calling, Multi-Agent Systems, n8n
AI/ML & Frameworks PyTorch, TensorFlow/Keras, Scikit-learn, Hugging Face Transformers, LangChain, OpenCV, NumPy, Matplotlib	Domains Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Conversational AI, Recommender Systems

Professional Experience

04/2026 – Present Karachi, Pakistan	Agentic AI Engineer Intern <i>BizBuddy</i> - Built and improved production-grade agentic AI systems for real-world business workflows using LLMs, n8n, APIs, and database integrations. - Independently developed AI agents from scratch, including tool-calling, workflow logic, and reliability safeguards. - Debugged and optimized existing agents to improve accuracy, robustness, and end-to-end workflow reliability.
--	--

Projects

AI-Powered Multilingual Translator <i>Python Hugging Face Transformers Meta NLLB-200 Streamlit</i> - Developed an AI-powered multilingual translation application using Meta NLLB-200, enabling translation across 200+ languages with an interactive Streamlit interface. - Implemented transformer-based neural machine translation with Hugging Face Transformers and optimized inference using model caching for efficient performance.
Face Emotion Detection System <i>CNN, TensorFlow/Keras, OpenCV</i> - Designed and trained a custom CNN from scratch on the FER2013 dataset (35K+ images) to classify facial expressions into 7 emotion categories, achieving 67.6% test accuracy using data augmentation, batch normalization, and dropout regularization - Built a real-time emotion detection pipeline using OpenCV for face detection, integrated with the trained model to support both live webcam and static image inference
Reinforcement Learning Navigation Agent <i>Python NumPy Q-Learning Tkinter</i> - Implemented a Q-Learning navigation agent from scratch using NumPy, with epsilon-greedy exploration, Bellman updates, and reward shaping in dynamic grid environments. - Built a real-time GUI to visualize training, learned policies, Q-value heatmaps, and agent navigation across configurable environments.
